Executive Summary

Banking Customer Intelligence Report · 2,940 Customers

What the Data Shows

01 High fee customers are most common in Gold tier — fee type is the clearest difference between tiers

02 Nearly half of all customers (44%) are in Jade tier — the largest group with the most room to grow

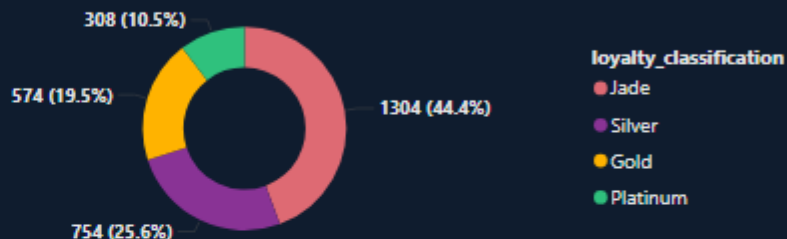

03 6 out of 10 customers owe more to the bank than they have saved — borrowing drives the business

04 Safe and risky customers are spread equally across all loyalty tiers — loyalty does not mean lower risk

05 Business customers earn the highest average income — more than even Private Bank customers

06 All loyalty tiers show very similar financial behavior — what makes a top customer is not visible in the numbers alone

Who are our customers?

What the Bank Should

01 Focus on Jade customers. Half of all customers are one step away from being more valuable to the bank

02 Collect more customer data. Numbers alone cannot explain loyalty — track how customers actually use the bank

03 Collect more customer data. Numbers alone cannot explain loyalty — track how customers actually use the bank
